Volume 2 – June 2014

## SERVETEC RE-DESIGNS ELECTRONIC CONTROL SYSTEM

The new electronic system design for access control vestibules integrates simple analog technology, advanced security functionality and facilitates service maintenance. It serves to upgrade existing facilities and is available in kits for ease of installation. The system is compatible with any brand vendor in the market. A new digital design will be available in September for IP and data connectivity.

### ANNUAL SERVICE CONTRACT

Since January 2014, Servetec has expanded the Annual Service Contract options to include preventive maintenance, service calls and parts/accessories availability. Annual services have proven essential to optimizing system operational continuity and reducing the costs of repairs and maintainability. Call 787-272-1908 for more information.

### UNIT ASSESSMENT PROGRAM

The Unit Assessment Program (UAP) continues to be available to assess the capacity of the units to meet requirements, the risks their condition may create and the provide critical recommendations that assures and optimizes operational control and continuity. The assessment serves to also profile the unit components and accessories for future reference. The reliability of security systems is critical important to the investments already in place and the risks that it may pose to the protection of clients, employees and property. Call to obtain more information and how your particular needs can be best assessed through our UAP.

---

*“We serve customer needs for maintaining and optimizing security investment, risk manage and protection of personnel and property through efficient, reliable personnel screening and access control systems” – our mission*

---

### PERSONNEL SCREENING UNITS

We offer various alternatives to personnel screening and weapon detection in airports, ports, health institutions, state and federal courts, municipality facilities, prisons, events, entertainment, cultural activities, and commercial security. High performance and programmable walk through detectors can be easily installed and serviced to meet stringent control and high discrimination of metals. During the 2014 Intercollegiate Track & Field events in Ponce, 15 units were used at established check points to insure orderly and proper surveillance that made the event a very secured and successfully one.

## KEY INTEGRATION OF SECURITY OPTIONS

The access control units and their corresponding hardware for access control and metal detection require integration with other components such as Cameras, Surge Protection, LED lighting fixtures. We offer various alternatives to our customers to insure their investment, risk management and commitment to protecting employees, clients and property. Contact 787-272-1908 for more information and free consultation.

## SPARE PARTS

We stock various spare parts for structural and electronic accessories associated with Access Control Vestibules ("Mantrap") units and pass through Metal Detectors. Call us for more information on your needs for parts.

## UPGRADE KITS

The vestibule access control units installed in the field may need to be updated to a more advanced and reliable electronic control system. We have developed an upgrade kit which can be installed in older models of Novacomm, Isotech and Hamilton units and increase their reliability and proper operational control. Call for more information.

## REFURBISHED VESTIBULE UNITS

We have acquired a number of used access control vestibule units and have refurbished them with new electronics and made them available under a one year warranty. Call for quotation.
